

GUYS AND HYLTON POLYTUNNEL REFURBISHMENT 2019

This was the state of our Polytunnel until Nick and his team came along on Monday, 1st April, 2019 and took it all apart.

Tuesday the 2nd did not go well as it was blowing a gale and the team was unable to resheet it, but Nick assured me that the weather forecast on his phone stated that at 7 am next day the wind speed would be 6mph and they would be there to go for it, by the time we all arrived, it was sheeted before 8.30 am. The work then began to get all the fixing underway.

Unfortunately, there was a severe frost that night, but most things seemed to survive where precautionary fleeces were laid.

The team worked throughout Wednesday 3rd and Thursday 4th April as the pictures show the work progressing, doors were re-squared, re-strengthened and re-hinged. We have been advised the material used on the cover will keep us 2 degrees warmer in winter and a few degrees cooler in summer and it is anticipated that we will proceed with a water capture system to become as eco-friendly as possible
